

Electrode Holder FlexiLab with Magnetic Base, neoLab®

Ultra-flexible electrode holder with 3 openings at the front for inserting electrodes or probes.

Ultra-flexible thanks to the mobile links but very stable.

Easy to use and can be fixed anywhere using the heavy magnetic foot.

The length of 70 cm permits measurements even in taller receptacles on a magnetic stirrer.

A stand base for attachment of the magnetic foot can also be supplied (please order separately).

Article	Order No.
